**APPLICATION – NATIONAL POLLUTANT DISCHARGE
 ELIMINATION SYSTEM (NPDES) PERMIT**

APPLICANT		Application No.	
Facility Name		County	
Address		Telephone No.	
Existing CSMO Permit No.		Existing NPDES Permit No.	

1. Standard Industrial Classification – SIC Codes											
SIC Code			First			SIC Code			Second		
SIC Code			Third			SIC Code			Fourth		

2. Company Representative(s) – Provide the names, titles, and telephone numbers of the company officials who have direct responsibility and authority to sign and submit the **Discharge Monitoring Reports** (DMLR-PT-119) that will be required by the NPDES permit. These officials must have the responsibility and authority to ensure: (a) compliance with the permit’s effluent limitations; (b) that discharges are properly sampled and analyzed; and, (c) the monitoring reports (DMLR-PT-119) are properly completed, signed, and timely submitted.

Name of Company Official	Title	Telephone (work)	Telephone (home)

3. Sample Collection/Analysis – If the company contracts for sampling or testing, provide the following information:

Laboratory Name	Address	Telephone
Contact Person		

- 4. Outfall Location** – On “Attachment4-A” (see Page 6), for each outfall and haulroad sump, list the latitude and longitude of its location and the name of the receiving water.
- 5. Flows, Sources of Pollution, and Treatment Technologies**
 - A.** Attach a line drawing showing the water flow through the permit. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units labeled to correspond to the more detailed description in item B. Construct a water balance on the line drawing by showing average flows between intakes, operations, treatment units, and outfalls. If a water balance cannot be determined (e.g., for certain mining activities), provide a pictorial description of the nature and amount of any sources of water and any collection or treatment measures.
 - B.** For each outfall, provide a description of: (1) all operations contributing wastewater to the effluent, including process wastewater, sanitary wastewater, cooling water, and storm water runoff; (2) the average flow contributed by each operation; (3) the treatment received by the wastewater; and, (4) the outfall(s) to be utilized as representative for effluent characterization and a listing of those outfalls represented. Use additional pages as necessary.

Mined Land Repurposing
Application – NPDES Form

Outfall Number:				
Classification: E = existing and P = proposed. If P, list date discharge expected to begin				
Type of Discharge: G = ground water, S = surface runoff, P = process water, and O = other (specify)				
Sources of Discharge: For each outfall discharge, identify its source(s). Some discharges may have more than one source; therefore, identify all applicable sources that result in each outfall discharge. Check the applicable block(s).				
Representative Outfall for effluent characterization				
List of outfall(s) represented or N/A = not applicable				
<u>Surface Runoff Sources:</u> Mine Portal Area				
Coal Loading Area				
Coal Stockpile Area				
Refuse Area				
Preparation Plan Area				
Railroad Track Area				
Other (specify)				
<u>Source(s) other than surface runoff:</u> Mine Dewatering				
Preparation Plant				
Other (specify)				
Discharge Information; Average Flow (gpm)				
Drainage Area (acres)				
Disturbed Area (acres)				
Treatment Facility Identification				
Capacity				

Comments

6. Description of Discharge(s) and Treatment Facility(ies)

<p>Type(s) of Treatment Provided: For each of the outfall discharges described above, give an explanation of the type(s) of treatment that will be provided, such as – (1) Sedimentation (solids removal by gravity settling); (2) chemical treatment (i.e., pH neutralization, iron (Fe) removal by oxidation, flocculation, or sedimentation); (3) manganese (Mn) removal by oxidation, flocculation or sedimentation; or (4) other methods (describe).</p>
<p>Chemical Agent(s): If chemical agents (including flocculants, polymers, organic or inorganic compounds) are to be used as part of the treatment process, provide the following information for each chemical agent: (1) trade name of the agent; (2) toxicity of agent; (3) purpose for using the agent and type of treatment for which the chemical agent will be utilized; (4) the specific outfall discharges in which the agent will be used; and, (5) any other pertinent information.</p>
<p>Leaks or Spills: Provide existing information regarding the history of significant leaks or spills of toxic or hazardous pollutants at the facility in the last three years, including the approximate date and location of the spill or leak, and the type and amount of material released.</p>
<p>Biological Toxicity Testing Data: Include, in Attachment8-A” (see Page 10), the results of any biological analysis for acute and/or chronic toxicity that have been made on any of your discharges or on a receiving water in relation to your discharge within the past three years.</p>

7. Pollutant Characteristics: Check **YES** or **NO**, as applicable to the permit or proposed permit area.

YES	NO	
		A. The area contains a publicly owned treatment works which discharge into the water of the United States.
		B. The facility treats, stores, or disposes of hazardous wastes.
		C. Fluids are injected at this facility which are: (1) brought to the surface in connection with conventional oil or natural gas production; (2) used for the enhanced recovery of oil or natural gas; or (3) for storage of liquid hydrocarbons.
		D. The area contains a concentrated animal feeding operation or aquatic animal production facility that discharges into the waters of the United States.
		E. This facility will inject industrial effluent below the lower most stratum containing, within 1 quarter mile of the well bore, underground sources of drinking water.

8. Effluent Characteristics: Provide the following information regarding the quality and quantity of discharges from the permit (or proposed permit) area. (Note: If analytical data is available, provide the results of at least one analysis for every pollutant in the following table. Complete one table for **each representative outfall** (as indicated in part 5(B)). Use additional pages as necessary.

Outfall No.		Are all other applicable pollutants listed in EPA form 2C but not listed below believed to be absent? YES or NO If NO , list those additional pollutants in the table below and include analytical results and units.	
Parameter	Analytical Result	Unit	
Flow			
Temperature			
pH			
TSS			
Specific Conductance			
TDS			
Sulfates			
Bromide			
Chlorides			
Aluminum			
Iron			
Manganese			
Magnesium			
Total Acidity			
Total Alkalinity			
Bicarbonate Alkalinity			
Carbonate Alkalinity			
Hardness			
Total Zinc			
Total Antimony			
Total Arsenic			
Total Beryllium			
Total Cadmium			
Total Chromium			
Total Copper			
Total Lead			
Total Nickel			
Total Selenium			
Total Silver			
Total Thallium			
Total Barium			
Total Boron			
Total Cobalt			
Total Cyanide			
Total Phenols			
Nitrate			
Nitrite			
Dissolved Organic Carbon			
Hydrogen Sulfide ¹			

¹ This parameter need only be analyzed for underground mine discharges.
